

# VIKASH VOONA

## Quality Engineering and Assurance

✉ vikash.voona@cognizant.com ☎ +91 96186 24587 📍 Hyderabad 🔗 [linkedin.com/in/vikash-voona](https://www.linkedin.com/in/vikash-voona)

### SUMMARY

Quality Engineering professional with 6.8 years of experience delivering high-quality enterprise applications across Design Systems, IAM (SailPoint & Active Directory), Insurance, and Financial Reconciliation domains. Strong expertise in **Functional** and **end-to-end manual testing**, including requirements analysis, test case design and execution, **cross-platform UI validation**, **API testing**, **Defect management**, and release sign-offs within Agile environments. Hands-on experience in supporting and maintaining **Selenium WebDriver (Java)** automation to enhance functional test coverage and ensure regression stability. Recognized for strong ownership and consistently delivering zero-defect, zero-downtime releases for business-critical systems.

### SKILLS

#### Languages

Java, HTML

#### Automation

Selenium WebDriver (Java) - support & maintenance

#### Testing tools

Jira, qTest, BrowserStack, SeeTest, BitBar

#### IAM Tools

SailPoint IdentityIQ

#### Frameworks

CRAFT, ATDD

#### Methodologies

Agile, Kanban, Waterfall

### PROFESSIONAL EXPERIENCE

#### Associate - Projects, Cognizant Technology Solutions ( Aug 2022 - Present )

##### Project: Guardian Design System (GDS)

- Owned the end-to-end QA lifecycle including functional, UI, Smoke and regression testing, for an enterprise-wide reusable design system supporting multiple applications
- Managed release sign-offs, WSRs, SLAs, and Agile metrics to ensure predictable and high-quality deliveries
- Executed cross-browser and responsive UI testing by validating components against Figma designs, ensuring pixel-perfect CSS compliance across Desktop, Tablet, and Mobile viewports
- Supported automation stability by maintaining XPaths and existing Selenium scripts
- Played a key QA role in a system-wide TypeScript migration, validating refactored components and actively participating in PI planning and architecture reviews
- Impact: Improved UI consistency, reduced production defects, and strengthened release confidence across consuming applications

##### Project: SailPoint IdentityIQ

- Validated end-to-end Identity Lifecycle Management (JML) including onboarding, offboarding, and role changes
- Tested RBAC, SoD policies, access certifications, and provisioning workflows across integrated enterprise applications
- Ensured strict compliance with security and governance requirements through detailed validation and defect tracking

##### Project: GPT

- Validated end-to-end data integration across multiple insurance modules, including Policy, Enrollment, and Claims, ensuring functional accuracy and seamless system communication.
- Orchestrated payment processing and validation based on specific business requirements, verifying successful completion and data integrity across the payment lifecycle.
- Led financial reconciliation and compliance audits for Journal Transaction Registers, General Ledgers, FOBS, and OFAC reports to ensure 100% accuracy and regulatory adherence.

## System Engineer, Tata Consultancy Services Limited ( May 2019 - Aug 2022 )

### Project: TCUID Portal

- Performed functional and regression testing to validate business workflows and ensure application stability.
- Identified and flagged bugs and defects, collaborating closely with developers to ensure timely resolution.
- Validated that user expectations and business requirements were met throughout the testing lifecycle.
- Actively participated in regression testing cycles to assess the impact of new changes and prevent defect reoccurrence.
- Supported defect triage discussions and re-testing activities to maintain overall application quality.

### Project: Active Directory (AD) Migration

- Acted as a focal tester in the project team and prepared test cases based on the application functionality, while guiding the team in the right direction to achieve project deadlines.
- Identified and reported errors, bugs, functionality differences, and issues after migration, and evaluated the performance of production servers before and after migration activities.
- In addition to testing activities, supported the migration of basic applications to a new domain and actively monitored applications post-migration, addressing user-reported issues and providing assistance.

### Project: PLM Monitoring Tool

- Worked as a manual tester across multiple application modules and prepared test cases from scratch.
- Performed smoke, functional, and regression testing, identified defects and bugs during the testing process, and communicated them effectively to developers.

## CORE COMPETENCIES

---

### Manual Testing

Functional, Integration, Regression, UAT

### UI & Cross-Platform Testing

Desktop, Tablet, Mobile (Android & iOS)

### Defect Management & Test Design

### Release Management & QA Sign-off

## EDUCATION

---

### Bachelor of Technology (2015 - 2019)

Aditya Institute of Technology and Management

## LANGUAGES

---

### Telugu

Native/Bilingual Proficiency

### English

Bilingual Proficiency

### Hindi

Limited Working Proficiency

## ACHIEVEMENTS

---

### Raising the Bar Award

*Recognized for independently managing the complete QA lifecycle of the Guardian Design System with exceptional ownership*

### Golden Guru Award

*Honored for mentoring new associates and improving overall team delivery and quality standards*

### On-the-Spot Award

*Awarded for executing a critical Active Directory migration under tight timelines with zero downtime*

## CERTIFICATIONS

---

- Selenium WebDriver with Java - Udemy
